PRO DUTY

Pro Duty is an Engineered pulley with a profiled end disc. It's built specifically for a customer's application or whenever increased reliability is desired.

MINE DUTY PRO

Mine Duty Pro is now our standard Mine Duty design. The addition of a profiled end disc dramatically increases reliability, but at the same price as our previous Mine Duty.

ULTRA PRO

Ultra Pro is an even more robust design with an extra heavy rim that requires no center disc supports. It offers an estimated two times the life of a comparable Mine Duty.

All three pulley classes are available with XT® bushings only.

PRO DUTY DRUM

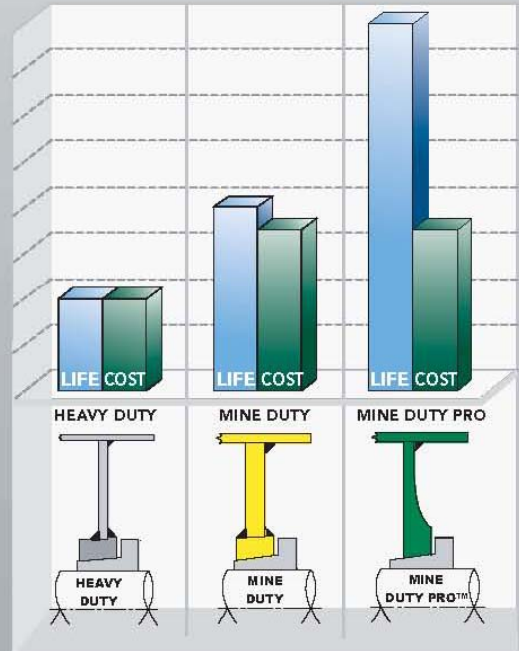

Profiled end disc reduces stresses because of improved flexibility

Generous machined radius with no weld removes stress risers

Most common mode of failure is eliminated (hub to end disc weld)

Price competitive with Engineered Class and Mine Duty

Hub distortion is greatly reduced, since there is no hub to end disc weld
